

A 10x10 grid with 30 black circles scattered across it. The circles are distributed in a way that suggests a random process, with some areas having more circles than others. For example, the top-right quadrant contains a higher density of circles compared to the bottom-left quadrant. The circles are all of the same size and are drawn with a thin black outline. The grid lines are thin and light gray, providing a clear reference for the positions of the circles.
