

A scatter plot on a 10x10 grid. The grid lines are light gray. There are 30 data points, each represented by a small open circle with a black outline. The points are distributed across the grid, with a higher density in the center and fewer points towards the edges. The points are located at the following (x, y) coordinates (assuming the bottom-left corner is (0,0) and the top-right corner is (10,10)):
